Amazon's Fake Review Problem Tells You What the Company Really Thinks About Its Customers

Amazon has a problem. It's the kind of problem that's obvious once you know where to look, but easy to miss considering the year the company has had. I mean, by all accounts, it's been a very good year to be selling things online. As online shopping surged during the pandemic, Amazon exploded. It became the place we went for everything from toilet paper, to laptops, to groceries. The problem, however, is that not all of those products are what they seem. For a long time, I've felt like the thing no one says about Amazon, but everyone thinks, is that unless you're buying a major brand from a seller you recognize, you're basically just buying cheap imitations from a guy off the street. You have no idea what you'll get or whether it'll do the thing it says it will do.

Of course, someone a long time ago came up with the idea that customers should be allowed to leave reviews about products they buy. That sounds like a great solution, until you have the experience of buying a product with thousands of glowing reviews, only to have it show up and not be at all what it seemed to be online. It's almost as if many, if not all, of those positive reviews were for something else altogether. Or, perhaps they were fake.

In some cases, as the WSJ reported over the weekend, buyers who leave negative reviews are contacted and harassed by sellers in an attempt to get them to change or remove their review. Some even offer refunds that exceed the purchase price of whatever product they bought.

Of course, Amazon directly benefits from those reviews. Every product that sells on Amazon generates a commission for the company. It literally profits from the scam of selling sub-par products with thousands of stellar reviews. Amazon has just as much invested in keeping away the negative reviews as the shady sellers do.
