While the scooter rental business has cooled off, electric scooters are here to stay. Increasingly popular as personal transportation, these micromobility machines with electric motors and straightforward controls are a great solution for last-mile transportation (getting home from the train or bus, for instance). They're nimble enough to transport you quickly, and you won't break a sweat while riding to work. And since they're much smaller and lighter than most bikes, they're easy to carry up stairs, stow under a desk or hide away in a closet.

The scaled-down sibling of the Segway Ninebot Max, the Segway Ninebot F30 features the same high-quality construction and straightforward controls of our top pick - though with a bit less power and range - at a much lower price. Plus, you still get all the perks that come with the Segway mobile app, like route maps, Bluetooth locking capability and real-time battery level percentage.

Electric scooters can be an efficient and convenient mode of transportation, but only if they work for you and with your lifestyle. Take the time to really think about your travel and commute needs and how you'll be using it, and you'll be able to figure out whether a scooter is for you.

Electric scooters really shine in "last mile" applications, filling in part of a commute that isn't covered by other transportation. They can eliminate time spent walking to the bus stop or train station, waiting around for the next scheduled service or driving around looking for a parking spot in your car. They're ideal for supplementing other forms of transportation.

A 2022 UCLA data analysis of injury data since 2014 suggests that the injury rate for electric scooters was 115 per 1 million rides, more comparable to the injury rate for motorcyclists (estimated at 104 injuries per 1 million motorcycle ri
