It is not the same game but the same one.

In this game you play as a single player.

The same way you play as a team with two players.

The same way you play as a team with two players.

The same way you play as a team with three players.

The same way you play as a team with three players.

The same way you play as a team with three players.

The same way you play as a team with three players.

The last few years have seen the meteoric rise of "superfake" handbags, reports the New York Times, where a wave of Chinese counterfeiters have become very adept at copying bags by Chanel, Gucci, Hermes, Louis Vuitton, and more. Their expert handiwork-the use of better materials and more sophisticated manufacturing technology-has made it increasingly difficult for even a well trained eye to tell the difference between the real and the knockoff.

One anonymous authenticator admitted to the Times, that the knockoffs "are getting so good, to the point that it comes down to inside etchings, or nine stitches instead of eight," he said.

"Sometimes you really have no idea, and it becomes a time-consuming egg hunt, comparing photos on other websites and saying, "Does this hardware look like this one?"

And the counterfeit bag makers are fast now too.

China has tried to aid them, confiscating 300,000 knockoff bags and wallets in 2022, but the designers's plight is only further complicated by Chinese authorities who don't have much incentive to help crack down on superfake manufacturers. For those who want a knockoff bag for a few hundred dollars instead of a few thousand, at least they know what they're getting themselves into.

That's why the fashion houses, of course, would prefer it if you just bought it directly from them.

Some even pay Google to appear at the top of the search results as advertised businesses, while selling fake reviews for apps on Google's own store.

Researchers pretending to be developers looking for fake reviews for an app were approached by several users offering reviews for as little as \$1.70.

Experts also analysed the content of the reviews using sentiment analysis and found that apps with fake reviews had a higher proportion of subjective five-star reviews favouring personal opinion such as "best app ever" over factual information.

On the Apple App Store, one in six (17%) apps in the health & fitness category and one in seven (15%) apps in the games category raised red flags.

Play Store

A quarter (25%) of apps on the Google Play store out of the top 100 in certain popular categories have suspicious reviews (Picture: unsplash)

"Apple and Google are failing to prevent fake and suspicious reviews infiltrating their app stores, leaving consumers at huge risk of being misled into downloading apps that have been boosted through unscrupulous tactics," said Rocío
